

**Keep your social distance
While getting closer to your patients**

Meditouch delivers a device to your patient that allows for TeleHealth with technology. Help your patients at a distance and really see what they're doing. Here's how it works.

Therapist meets patient online and guides the patient to set functional range of motion

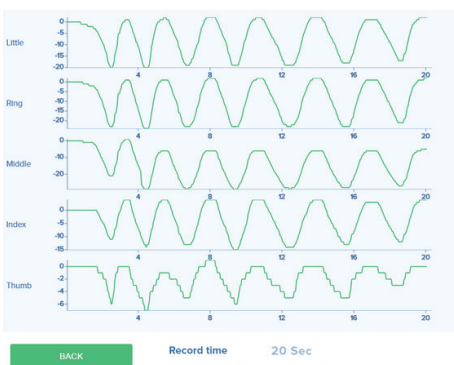

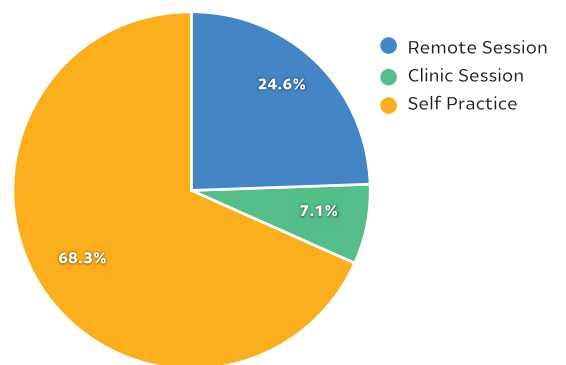

Patient exercises by playing video games as directed by the therapist.

Therapist sees and monitors performance.
Customizes tasks in-session based on real-time data

PERFORMANCE	
Parameter	Value
Time Played	75 Sec
Game Score	54
Forearm L Sup/Pron	65 Deg
NOTES	
Active supination from neutral	

Therapist monitors compliance.
Plans plans next session based on performance.

What our customers are saying

If we did not convince you, maybe a few words from our customers will!

Rebecca Martin, OTR/L, OTD

Manager Clinical Education and Training
International Center for Spinal Cord Injury
Kennedy Krieger Institute

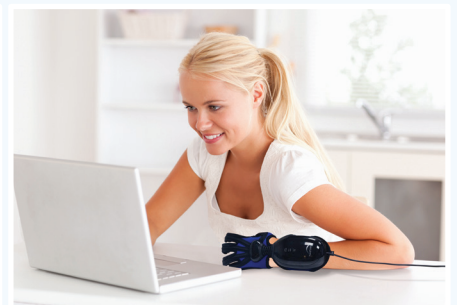

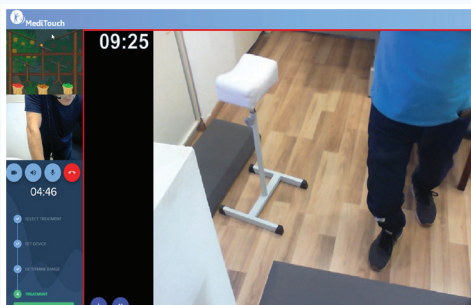

.....
The meditutor has been a great tool for us in adapting therapy to a virtual setting. It allows us to bridge the physical gap of telehealth by providing an engaging activity that encourages large repetitions of therapeutic movement to continue working toward our patient's functional goals. The system also lets us set up home programs, track progress, and increase the challenge as we see our patients make progress. Our patients have responded well to this intervention and enjoy how fun therapy can be when it is disguised in a computer game.
